

Unical at Milan Design Week 2019

Unical takes part for the first time at Fuorisalone with its own installation dedicated to innovation, within Tortona Rocks. The boiler **OSA**, together with the innovative pellet stove **TUA** and **MIMO**, the cover designed to conceal the air-conditioner outdoor unit, take the central stage. On show also some other Unical products that allow to track the company ideal path towards the innovation of boilers and air conditioners both from a technical and aesthetic point of view.

From April 9th to 14th at Opificio 31, in the OFFICINA 2 space, Unical welcomes its visitors and guides them in an itinerary between design and technology.

Thanks to the presence of qualified personnel, available to organize personalized meetings, the visitors can discover the technical details and performances of each exhibited product.

Within Unical space, an AVR display brings people inside the emotional world of Unical.

Besides, it is also possible to download the innovative Uview App to navigate the 3D catalogue.
